Dear Mr. Finch:

Thank you for taking the time out of your schedule to meet with me at your Navajo quarry on October 20, 1998, to address reclamation plans pertaining to this site.

This letter is sent to your office to recap the reclamation plan we agreed upon during our meeting. The following is a summary of reclamation discussed during this meeting.

Any available material will be utilized to fill the large cracks and lessen the highwalls along the southwest area in order to make said area safe and resemble the natural topography of the surrounding hills.

The road accessing the quarry benches on the west-facing slope shall be contoured to resemble the natural topography of the hillside and to discourage travel along said road.

The northeast area, although rather steep, does not seem to pose any significant danger to public or livestock, and would not require any further earth-work.

All disturbed areas shall be seeded with a BLM recommended certified pure live seed mixture when all earth-work has been completed. For better success, seeding should take place in the late fall before the ground freezes.

Due to the fact we are in late fall, coordination of the earth-work may not be possible until the spring of 1999. In

Thank you once again for your time in resolving this matter, and if you have any question please feel to contact me at (435) 743-3125.

Sincerely,

A handwritten signature in dark ink, appearing to read 'Larry Garahana', with a stylized, cursive script.

Larry Garahana
Geologist
